# Day 43 ? Compliance Readiness Report

## Executive summary

This is a technical readiness review of the inspected repository, not a legal opinion, audit certification, or claim of compliance with a particular law or standard.

## Findings

| Area | Evidence observed | Readiness status |
|---|---|---|
| Personal-attribute masking | Configured key-based masking in resume normalization | Partial; test coverage and end-to-end propagation need verification |
| Scoring transparency | ATS score breakdown and unified scoring decision note | Partial; user-facing explanations and reviewer procedures need verification |
| Candidate consent | No explicit consent-capture workflow identified in inspected source files | Gap to investigate and address where required |
| Retention schedule | No defined retention policy identified in inspected source files | Gap |
| Automated deletion | No retention-based deletion workflow identified in inspected source files | Gap |
| Access control | Not established by the inspected scoring and parser modules | Requires application/deployment review |
| Security and audit trail | Not established by the inspected modules | Requires application/deployment review |
| Fairness outcome testing | Rule-based indicators exist; demographic outcome evidence was not supplied | Not demonstrated |

## Data inventory to complete

The product owner should map resume files, parsed text, candidate identifiers, interview responses, transcripts, scores, generated reports, logs, backups, and third-party service data. Record each system location, purpose, access roles, data owner, and deletion method.

## Retention and deletion requirements

Before deployment, the responsible organization should:

1. Define a purpose-based retention period for each data category.
2. Confirm applicable legal, contractual, and organizational requirements with qualified counsel or a privacy lead.
3. Explain retention and deletion practices to candidates as required.

4. Implement deletion or anonymization across primary storage, generated files, logs, backups, and third-party processors where applicable.
5. Document exceptions such as legal holds and establish an auditable deletion process.
6. Test deletion behavior and verify that expired data cannot be retrieved through normal application paths.

No arbitrary retention period is prescribed in this report because the applicable requirements and operational context have not been established.

## Consent and rights handling

Document the applicable legal basis for each processing purpose. Where consent is required, implement notice presentation, affirmative consent capture, version and timestamp records, withdrawal handling, and a way to stop future processing as required. Define a process for candidate access, correction, objection, or deletion requests where applicable.

## Governance and human oversight

- Assign a named owner for candidate data and the AI system.
- Document intended use, prohibited uses, limitations, and escalation paths.
- Require human review of hiring recommendations.
- Provide a process to investigate disputed or incorrect scores.
- Restrict access to candidate information and record privileged access where appropriate.
- Review third-party processors, hosting, cross-border data flows, and security controls.

## Release gates

Before production use, obtain evidence for:

- An approved data inventory and retention/deletion schedule.
- Verified consent or other lawful processing workflow as applicable.
- Access-control and security review.
- End-to-end tests for personal-attribute masking.
- Documented human review and candidate challenge process.
- A representative, appropriately governed fairness evaluation.
- Legal/privacy review of applicable obligations.

## Conclusion

The repository has preliminary masking and scoring-explanation controls. Consent capture, retention/deletion, access controls, and measured fairness outcomes remain unverified or not identified in the inspected code. These items should be treated as release-readiness gaps until evidence demonstrates otherwise.
