Day 52 – Final Recommendation AI

Objective

Produce Selected, Hold / Review or Rejected recommendations from the unified score and risk factors.

Logic

• Missing scores or insufficient coverage result in Hold / Review.

• High or unverified risk factors require human investigation.

• Otherwise configurable thresholds determine the recommendation band.

• Confidence is a coverage-based heuristic, not a statistical probability.

Safety

This is decision support only. Every recommendation requires human review; no autonomous hiring or rejection occurs.
