Day 54 – Optimization & Refinement

Objective

Measure false positives, false negatives, threshold performance and cross-round score consistency.

Implementation

• Confusion matrix: TP, TN, FP, FN.

• Accuracy, precision, recall and F1 on labelled validation examples.

• Threshold evaluation does not change production thresholds.

• Mean, range and population standard deviation for supplied scores.

Limitation

Metrics require representative labelled validation data. This framework does not claim improved real-world accuracy or automatically alter existing scoring engines.
