Day 55 – Security & AI Governance

Objective

Establish audit, retention, consent and role-based access baselines.

Implementation

• Purpose-specific consent can be granted or revoked.

• Audit metadata records actor, action, subject and timestamp; sensitive transcript/secret fields are excluded.

• Role permissions cover admin, recruiter, reviewer and auditor.

• Retention status calculates a policy expiry date.

Production limitations

This is an in-memory reference framework. Persistent storage, encryption, authentication, cryptographic audit immutability and actual deletion are not implemented. Production needs encrypted storage, TLS, secret management, least privilege and verified deletion.
